

# CONTENTS

Preface	<i>Tom Nishida</i>	i - xvii
---------	--------------------	----------

## PART I KEYNOTE ADDRESS

Spatial statistics and aquatic Geographic Information Systems	<i>Anthony Booth</i>	3- 44
---------------------------------------------------------------	----------------------	-------

## PART II ORIGINAL ARTICLES (MARINE)

### CONCEPT

Knowledge representation and semantic interoperability in marine information systems	<i>Zarine Kemp Robert Frank</i>	47-64
--------------------------------------------------------------------------------------	-------------------------------------	-------

### HABITATS AND ENVIRONMENTS

Understanding the distribution of maerl, a calcareous seaweed, off Dorset, UK	<i>Annika Mitchell Ken Collins</i>	65-82
Mapping <i>Posidonia</i> meadows on Messioua Bank off Zarzis, Tunisia, using multi-beam sonar and GIS	<i>Teruhisa Komatsu Kerim Ben Mustapha Koji Shibata Kazuhiro Hantani Takushi Ohmura Cherif Sammari Chiaki Igarashi Amor El Abed</i>	83-100
Localisation of spawning and nursery areas of red mullet ( <i>Mullus barbatus</i> , Linnaeus) in the Italian side of the Strait of Sicily (Central Mediterranean Sea)	<i>Germana Garofalo Fabio Fiorentino Giacchino Bono Salvatore Gancitano Giacomo Norrito</i>	101-110
Geographical variation in the vertical distribution of cod ( <i>Gadus morhua</i> L.) and availability to survey gears	<i>Boonchai Stensholt Eivind Stensholt</i>	111-128
Typology of the demersal communities off Senegal: an approach combining GIS and multifactorial analysis	<i>Didier Jouffre Gilles Domalain Alain Caveriviere Mamadou Diallo</i>	129-146
Between SST and bathymetry: spatial techniques for defining the aquatic landscape	<i>Laura Kracker</i>	147-160
Characterising spatial and temporal variability of marine conditions in the North Sea, 1985-2000	<i>Anne Lucas W. Paul Budgell</i>	161-180

**MODELLING AND GEOSTATISTICS**

<b>Introducing greater ecological realism to fish habitat models</b>	<i>Paul Eastwood Geoff Meaden</i>	181-198
<b>Modelling the distribution of fish resources using oceanographic variables, statistical methods and GIS technologies</b>	<i>David Barratt Adrian Bugg Brent Wise Simon Barry</i>	199-214
<b>A stochastic approach to modelling spatial uncertainty in the distribution of pre-spawning North Sea Herring while accounting for environmental variables</b>	<i>Alessandro Gimona Paul Fernandes</i>	215-222
<b>A test for spatially correlated data: an alternative to the traditional t-test</b>	<i>Ding-Geng Chen Richard Leickly</i>	223-240
<b>Geostatistical modelling of biocenosis distribution in the Strait of Sicily</b>	<i>Germana Garofalo Michele Gristina Marco Toccaceli Giovannbattista Giusto Pietro Rizzo Giuseppe Sinacori</i>	241-250
<b>Meso-scaled investigation of spatial distribution of the flatfish species dab, <i>Limanda limanda</i> (Linnaeus, 1758), within the German Bight: a geostatistical approach</b>	<i>Vanessa Stelzenmüller Gerd-Peter Zauke Siegfried Ehrich</i>	251-270
<b>Integrated effects of marine benthic photosynthetically active microorganisms and a bioturbating polychaete, <i>Hediste diversicolor</i> (Müller) on oxygen distribution at the sediment-water interface: a geostatistical analysis</b>	<i>Detlef Henning Gerd-Peter Zauke Peter Stief Ekkehard Vareschi</i>	271-288

**ABUNDANCE ESTIMATION**

<b>Acoustical substrate classification for the improved estimation of geoduck clam abundance and distribution</b>	<i>Ian Murfitt Claudia Hand</i>	289-300
<b>GIS analysis for abundance estimation of kichiji rockfish, <i>Sebastolobus macrochir</i> G., on the continental slope of Jo-ban fishing ground, northeastern Japan: analysis of images recorded with a towed video camera system using GIS</b>	<i>Kazutoshi Watanabe Toshihiro Watanabe</i>	301-310

*Contents*

***MANAGEMENTS***

<b>EFISAT project: predictability of pelagic fishing ground off Chile using Remote Sensing and Geographical Information Systems</b>	<i>Claudio Silva Eleuterio Yáñez Karen Nieto María Barbieri Guillermo Martínez</i>	311-322
<b>A dedicated GIS to estimate and map fishing effort and landings for the Portuguese crustacean trawl fleet</b>	<i>Manuel Afonso-Dias Joana Simões Carlos Pinto</i>	323-340
<b>Spatial relationships between Japanese common squid (<i>Todarodes pacificus</i>) fishing grounds and fishing ports: an analysis using remote sensing and geographical information systems</b>	<i>Hidetada Kiyofuji Kazue Kumagai Sei-ichi Saitoh Yoshihiro Arai Kentaro Sakai</i>	341-354
<b>A GIS-based spatial analysis framework for developing habitat closure alternatives in New England, U.S.A.</b>	<i>Andrew Applegate Edward Durbeck</i>	355-380
<b>Spatial allocation of global fisheries landings using rule-based procedures</b>	<i>Reg Watson</i>	381-390

**PART III ORIGINAL ARTICLES**  
***(FRESH WATER & AQUACULTURE)***

***REVIEW***

<b>Geographical Information Systems in aquaculture development and management from 1985 to 2002: an assessment</b>	<i>James Kapetsky J. Aguilar-Manjarrez</i>	393-404
--------------------------------------------------------------------------------------------------------------------	------------------------------------------------	---------

***HABITATS AND ENVIRONMENTS***

<b>Pattern detection in stream networks: quantifying spatial variability in fish distribution</b>	<i>Christian Torgersen Robert Gresswell Douglas Bateman</i>	405-420
<b>Habitat fragmentation and modifications affecting distribution of the Rio Grande silvery minnow</b>	<i>Michael Porter Tamara Massong</i>	421-432
<b>Analyzing changes in river channel morphology using GIS for Rio Grande silvery minnow habitat assessment</b>	<i>Michael Porter Tamara Massong</i>	433-446
<b>Mapping Indian inland fish diversity using historical occurrence data in FishBase</b>	<i>Sanjeev Srivastava, Rodolfo Reyes Boris Fabres Alphis Ponniah Dhurendra Kapoor</i>	447-464

**MANAGEMENTS**

<b>Regionalization of stream fisheries management using Geographic Information Systems</b>	<i>William Fisher Ellen Tejan Paul Balkenbush</i>	465-476
<b>Use of Geographical Information Systems in evaluating relationships between catchment land use, vegetation, water regulation and water use patterns and riverine fish communities in Victoria, Australia</b>	<i>Nigel Abery Sena De Silva Brad Mitchell</i>	477-498
<b>Fish yield prediction based on catchment features, quantified using Geographical Information Systems, in lowland reservoirs of Sri Lanka</b>	<i>Upali Amarasinghe Sena De Silva Chandana Nissanka</i>	499-514

**MONITORING**

<b>Geospatial techniques for developing a sampling frame of watersheds across a region</b>	<i>Robert Gresswell Douglas Bateman George Lienkaemper Troy Guy</i>	515-528
<b>Floodplain fisheries monitoring and Geographical Information Systems in Bangladesh</b>	<i>Gertjan de Graaf</i>	529-542

**SITE SELECTION**

<b>Use of GIS for placement of rainbow trout culture in Denmark</b>	<i>Kerstin Geitner</i>	543-558
<b>Use of GIS tools to develop a scale for the selection of non-perennial reservoirs for culture-based fisheries activities</b>	<i>Sena De Silva Kelum Wijenayake Ajith Gunaratne Upali Amarasinghe</i>	559-572
<b>Remote sensing techniques for detecting and mapping aquaculture ponds in Bangladesh</b>	<i>Gertjan de Graaf Mohammad Kamal Timothy Martin Menno Schepel</i>	573-582
<b>Use of geographical information systems in developing freshwater aquatic sanctuary management strategies</b>	<i>Uttam Sarkar Ajey Pathak Dhurendra Kapoor Samir Paul Lakhan Mahato</i>	583-596

<b>PART IV INFORMATION PAPERS</b> <b>(SOFTWARE &amp; RESEARCH IN PROGRESS)</b>
-----------------------------------------------------------------------------------

**SOFTWARE**

<b>An Electronic Fishery Data Management System: a demonstration of a unique, wheelhouse, software solution for the collection, management and utilization of commercial fishing data</b>	<i>Amos Barkai</i>	599-606
<b>Data collection methods and GIS uses to enhance catch and reduce bycatch in the North Pacific fisheries</b>	<i>Robert Mikol</i>	607-614
<b>Introduction to Marine Explorer</b>	<i>Environmental Simulation Lab.</i>	615-624
<b>Open-source and freely available Geographic Information System software &amp; resources</b>	<i>Brent Wood</i>	625-640
<b>Visualisation of fisheries data using free scientific visualisation software</b>	<i>Brent Wood Alistair Dunn</i>	641-648

**RESEARCH IN PROGRESS**

<b>Cartographic representation of fishing sites for target species in the artisanal fishery around Gallinara Island (Ligurian Sea, Western Mediterranean)</b>	<i>Maria Piccione Sabrina Agnesi Andrea Molinari Leonardo Tunesi</i>	649-658
<b>Study of bathymetry effects on the nominal hooking rates of yellowfin tuna (<i>Thunnus albacares</i>) and bigeye tuna (<i>Thunnus obesus</i>) exploited by the Japanese tuna longline fisheries in the Indian Ocean</b>	<i>Tom Nishida Masahiko Mohri Kiyoshi Itoh Jun Nakagome</i>	659-672
<b>A visualisation of the spatial and temporal dynamics in the Namibian hake trawl fishery – a tool to understand the complexity of a fishery</b>	<i>Espen Johnsen</i>	673-678
<b>Fish diversity in the major rivers in southern Assam, Mizoram and Tripura</b>	<i>Devashish Kar</i>	679-692

<b>APPENDIX</b>
-----------------

<b>A</b>	<i>Pictures</i>	695-698
<b>B</b>	<i>Index of authors and co-authors</i>	699-701
<b>C</b>	<i>Index of key words</i>	703-706
<b>D</b>	<i>List of participants</i>	707
<b>E</b>	<i>Sum-up Session (Panel discussion)</i>	709-732
<b>F</b>	<i>Book Reviews</i>	733-735
